

VOID

## Our Mission

Void Acoustics stands at the forefront of sound, innovation and artistry. For more than two decades, we have developed audio systems that go beyond functionality, redefining what sound can be.

We pioneer aspirational sound systems, creating visually striking loudspeakers that place sound at the centre of the experience. Our systems do more than reproduce audio; they channel energy and emotion, becoming a defining part of every environment.

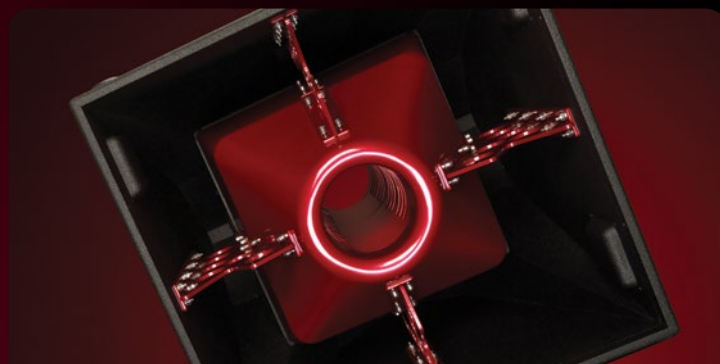

Through bold design and advanced engineering, Void creates immersive sound experiences that connect people to music and to each other.

## Our Story

Founded in the UK in 2002, Void Acoustics set out to transform the club experience by putting sound and design at the heart of the dancefloor. What began in Poole with hand-crafted loudspeakers quickly evolved into a globally recognised brand.

Today, Void systems power clubs, festivals, hospitality venues and cultural spaces around the world. Known for their distinctive aesthetics and exceptional performance, our loudspeakers deliver unforgettable sound wherever they are installed.

Driven by a commitment to design without compromise, Void continues to push the boundaries of audio engineering, creating systems that elevate spaces and inspire audiences worldwide.

AIR SERIES

# Breaking away from the mould

**Renowned within the audio industry for both its visual stimulus and pioneering technical features, the Air series is a favourable choice for clubs, restaurants and bars, wanting to make an impact.**

The distinct appearance and sound quality of the Air series is what Void Acoustics first became known for in the audio industry.

A firm favourite with clubs looking to create a dance experience that truly makes an impact, the Air Motion and Tri Motion systems serve as flagship art forms to elevate a dance floor.

Leading the way in design aesthetics, Air series products provide exceptional high power output with a non-fatiguing sonic signature, making them a real talking point within any environment wishing to impress.

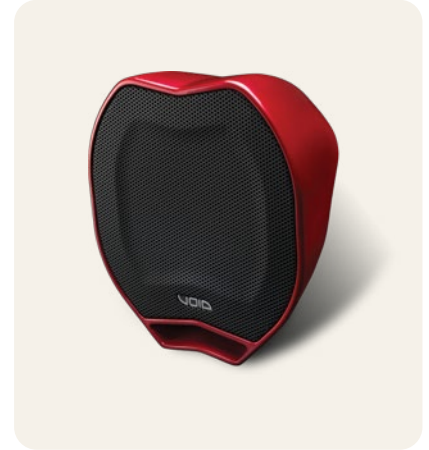

### Air Motion

The Air Motion is popular in nightclubs, restaurants, hotels, and bars. Featuring three transducers with isometric conical horns, it delivers enhanced beam width control, improved phase performance, and exceptionally balanced sound with outstanding definition.

### Air 8

The Air 8 is a statement loudspeaker for venues that value detail, commonly used in high-end bars, hotels and restaurants. Its fibreglass composite enclosure minimises resonance, while optimised dispersion and high-performance components deliver clear, balanced sound in a stylish, contemporary design suited to exclusive spaces.

### Air 12

The Air 12 features a coaxial transducer that delivers an exceptionally uniform radiation pattern for precise coverage and outstanding clarity. With an IP-54 rating and hydrophobic membrane for enhanced ingress protection, it offers reliable performance for a wide range of venues.

### Tri Motion

The Tri Motion combines distinctive aesthetics with exceptional sound performance. Its fibreglass construction minimises resonance, while asymmetric waveguides improve pattern control, making it ideal for high-impact nightclubs, restaurants, stylish bars, and VIP spaces.

### Airten V3

The Airten V3 features a jet-engine inspired design and delivers refined, high-performance sound. Its redesigned crossover and optimised rear port improve clarity, airflow, and reduce distortion, making it a popular choice for premium venues and exclusive homes.

### Air Vantage

The Air Vantage delivers striking sound and visual impact with its modern design. Its fibreglass construction minimises resonance, while optimised dispersion and true point-source radiation ensure even coverage, making it ideal for front-of-house or DJ monitoring.

### Air Stream

The Air Stream delivers true-to-source sound through true point-source radiation and phase-coherent performance. Its full-range capability and bespoke colour options make it ideal for design-focused spaces, combining striking aesthetics with high performance.

### Air 15

The Air 15 delivers powerful low-frequency output in a durable fibreglass enclosure with UV-resistant finish. Designed to complement Air and Cyclone systems, it offers high SPL performance and IP-X3 protection for indoor or outdoor use.

### Sub Vantage

The Sub Vantage is a stylish, high-output subwoofer designed for luxury spaces. With four 15" transducers and a split manifold design for fast transients, it delivers powerful performance and pairs perfectly with Air Stream or Air Vantage for venues and events.

### Stasys Xair

The Stasys Xair is a special 'Air' edition of the classic Stasys XV2, combining striking design with powerful performance. Featuring dual 18" transducers in a hybrid horn-loaded enclosure, it enhances transient and phase response, while its durable finish and touring-friendly design suit both events and style-led venues.

CYCLONE SERIES

# Packs a punch with exceptional, compact style

**With its compact footprint, IP-55 rated options, and optional colour customisation, the Cyclone series provides the ultimate audio solution for luxury destinations and spaces.**

This range of beautifully sculpted loudspeakers uses a combination of marine-grade 316 stainless steel hardware and a UV-stabilised finish to ensure every Cyclone product is durable and robust in a wide range of

outdoor environments that involve exposure to the elements.

Whatever the weather, Cyclone is sure to kick up a storm. The sleek design and styling of the Cyclone series makes it a winning choice for both residential and commercial applications. With the added option to customise colours, the aesthetic composition of any space can be met with ease.

### Cyclone 4

The Cyclone 4 is an ultra-compact IP-55 rated loudspeaker delivering excellent sound quality. Its weatherproof enclosure, UV-resistant finish, and marine-grade bracket make it ideal for all-weather installations.

### Cyclone 55

The Cyclone 55 delivers high fidelity and definition from an ultra-compact, visually appealing design. Its weather-protected IP-55 rated construction suits coastal and outdoor environments, while the adjustable mounting bracket allows precise aiming of its wide dispersion for efficient coverage of large audience areas.

### Cyclone Bass

The Cyclone Bass delivers powerful low-frequency performance for high-profile outdoor spaces, being IP-55 rated. Its 12" transducer and corrosion-resistant design make it ideal for beach bars, restaurants, and theme parks, while custom colours and phoenix connectors allow easy installation.

### Cyclone 8

The Cyclone 8 features an innovative design that is easy to install. Its compact form enhances efficiency and ease of use without compromising audio fidelity, while advanced porting minimises turbulent noise and maximises low-frequency performance. It's IP-55 rating makes it suitable for use outside.

## Cyclone 10

The Cyclone 10 provides full-range sound for venues requiring high-fidelity audio. Its IP-55 rating makes it suitable for both indoor and outdoor use. The sculpted fibreglass enclosure with a smooth cellulose finish ensures durable performance and years of reliable sound.

## Cyclone 208

The Cyclone 208 is a compact subwoofer designed to pair with Cyclone 4 or Cyclone 55, creating a stylish, high-output system. Dual 8" LF transducers and a low-resonance fibreglass enclosure deliver impressive output and extension. Ideal for bars, restaurants, retail, and other indoor applications.

## Cyclone 208i

The Cyclone 208i is a compact, powerful amplifier ideal for driving smaller Void speakers such as the Cyclone 4 or 55. Its dual 8" transducers and 600W integrated amplifier deliver excellent sound quality in a small footprint, with simple setup for applications requiring premium audio performance.

VENU V2 SERIES

# More attractive and unexpected than ever

**The Venu V2 series provides a contemporary alternative to the Void product range.**

The Venu V2 series has been ingeniously redesigned to ensure this winning range of loudspeakers exceeds the expectation of leading sound installation contractors and integrators around the world.

With optional colour customisation, natural wood options, and so many different sizes and power capabilities, you can confidently meet any venue's sound specifications using Venu products.

### Venu 6 V2

The Venu 6 is a versatile installation loudspeaker combining functionality with refined aesthetics. SpeakON™ and Phoenix connectors allow quick, reliable connection, while colour customisation enables a bespoke finish, making it ideal for home audio, restaurants, bars, and retail spaces.

### Venu 8 V2

The Venu 8 V2 offers versatile, high-quality audio with improved functionality and design. The rotatable HF horn ensures an asymmetrical dispersion for more controlled HF coverage, making it ideal for fill in larger restaurants, bars, and nightclubs.

### Venu 10 V2

The Venu 10 V2 delivers high-quality performance in a compact, durable design with a textured polyurethane finish. Optional top hat mounting and dual SpeakON™ and Phoenix connectors allow fast setup, making it ideal for restaurants, bars, and nightclubs.

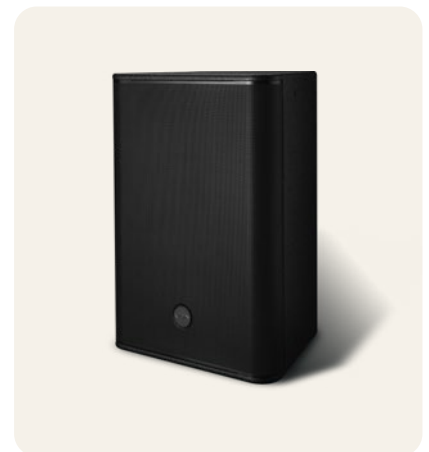

### Venu 12 V2

The Venu 12 V2 delivers consistent high-fidelity audio with a robust, versatile design. A rotatable HF horn allows flexible mounting, while HF protection improves reliability, making it ideal for smaller nightclubs and larger restaurants or bars.

### Venu 14 V2

The Venu 14 V2 combines over twenty years of Void Acoustics engineering with a compact 13.5" coaxial design. Its premium neodymium transducer and controlled dispersion deliver high-quality, flexible performance in a lightweight enclosure.

### Venu 15 V2

The Venu 15 V2 is the largest model in the range, featuring a 15" LF transducer and 1" HF compression driver. Ideal as a main system for small to medium venues such as nightclubs, bars, and lounges.

### Venu 112 V2

The Venu 112 V2 is a compact subwoofer designed to deliver powerful bass in an unobtrusive format. SpeakON™ and Phoenix connectors with link outs allow efficient setup, while a recessed rear panel enables close wall positioning.

### Venu 115 V2

The Venu 115 V2 delivers powerful bass from a compact enclosure. Featuring a recessed connector panel, SpeakON™ and Phoenix connectors for flexible installation, it is ideal for bars, clubs, lounges, hotels, and restaurants.

### Venu 118 V2

The Venu 118 V2 introduces an 18" subwoofer to the Venu V2 range, offering greater flexibility for installations. This low-distortion, high-excursion reflex-loaded subwoofer delivers powerful performance from a compact enclosure, designed to meet demanding installation requirements.

### Venu 212 V2

The Venu 212 V2 is a high-output reflex-loaded subwoofer designed for bars, nightclubs, lounges, hotels, and restaurants. Featuring dual 12" high-excursion transducers and a recessed rear connector panel, it delivers powerful, reliable bass performance.

### Venu 215 V2

The Venu 215 V2 is a dual 15" reflex-loaded subwoofer delivering powerful, high-impact bass. With durable high-excursion transducers, a recessed connector panel, SpeakON™ and Phoenix connections, it is ideal for bars, nightclubs, lounges, hotels, and restaurants.

### Venu 218 V2

The Venu 218 V2 introduces a dual 18" subwoofer to the Venu V2 family, expanding the range's flexibility. This low-distortion, high-excursion reflex-loaded design delivers the reliability and sound quality expected from Void loudspeakers.

### Venu 208

The Venu 208 is an ultra-compact low-frequency enclosure designed for demanding installations. Featuring dual 8" transducers, it delivers powerful bass for distributed or background music systems. A recessed connector panel and multiple mounting options allow flexible wall or ceiling installation.

### Venu 208i

The Venu 208i is an ultra-compact self-powered dual 8" subwoofer capable of powering up to four mid-high loudspeakers, including Cyclone 4, Cyclone 55, and Indigo 6s. With built-in DSP and advanced signal processing, it delivers consistent bass performance for commercial or residential applications.

### Venu 210i V2

The Venu 210i V2 is a self-powered dual 10" reflex-loaded subwoofer with integrated DSP and Ethernet control. Its dual 750W power module can drive up to four mid-high loudspeakers, making it ideal for home audio systems, bars, nightclubs, lounges, hotels, and restaurants.

### Venu 215i V2

The Venu 215i V2 is a dual 15" self-powered subwoofer capable of powering up to four mid-high loudspeakers. With full DSP control, four preset banks, and dual SpeakON® outputs, it delivers powerful and flexible performance for bars, clubs, lounges, hotels, and restaurants.

INDIGO SERIES

# Distinct and unmistakable

The stunning Indigo series combines futuristic looks with powerful audio performance to bring a level of sophistication for enviable venues.

Indigo is the ultimate in sleek styling and brings a level of sonic richness to commercial and residential installations.

Indigo has been created for the style-conscious buyer that today's venue designers aspire to impress. Boundaries are being pushed in all areas of the entertainment industry, with the visual aspect becoming ever more important.

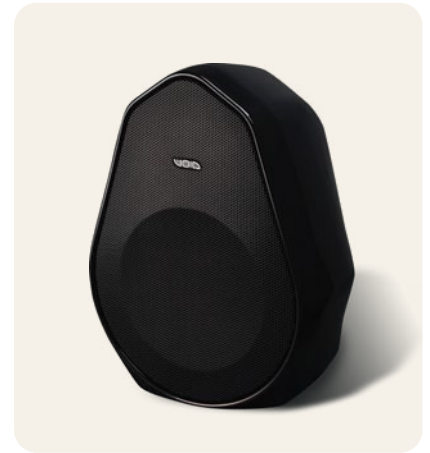

## Indigo 6s

The Indigo 6s is a stylish professional loudspeaker designed for luxury spaces. Its customisable fibreglass enclosure allows bespoke finishes, making it ideal for homes, restaurants, bars, lounges, and retail environments. Pairing with an Indigo Sub creates a powerful system for medium-sized venues.

## Indigo 6 Pro

The Indigo 6 Pro features a 6.5" LF and 1" coaxial HF compression driver for improved efficiency and output. Its sculpted fibreglass enclosure with bespoke colour options makes it ideal for rooftop bars, VIP lounges, restaurants, cafés, and retail spaces.

## Indigo Sub

The Indigo Sub features a 12" low-frequency transducer delivering deep, controlled bass. Designed to pair with Indigo 6s or Indigo 6 Pro, it creates a full-range system ideal for bars, lounges, restaurants, retail spaces, and VIP areas.

CIRRUS SERIES

# Timeless audio innovation

The Cirrus series is a pioneering range of integrated audio solutions, perfect for delivering audio fill in a range of environments including restaurants and hotels; leisure and retail settings; or as the main system for smaller home-audio and home-theatre set-ups.

Cirrus ceiling loudspeakers bring Void's quality and attention to detail to the commercial

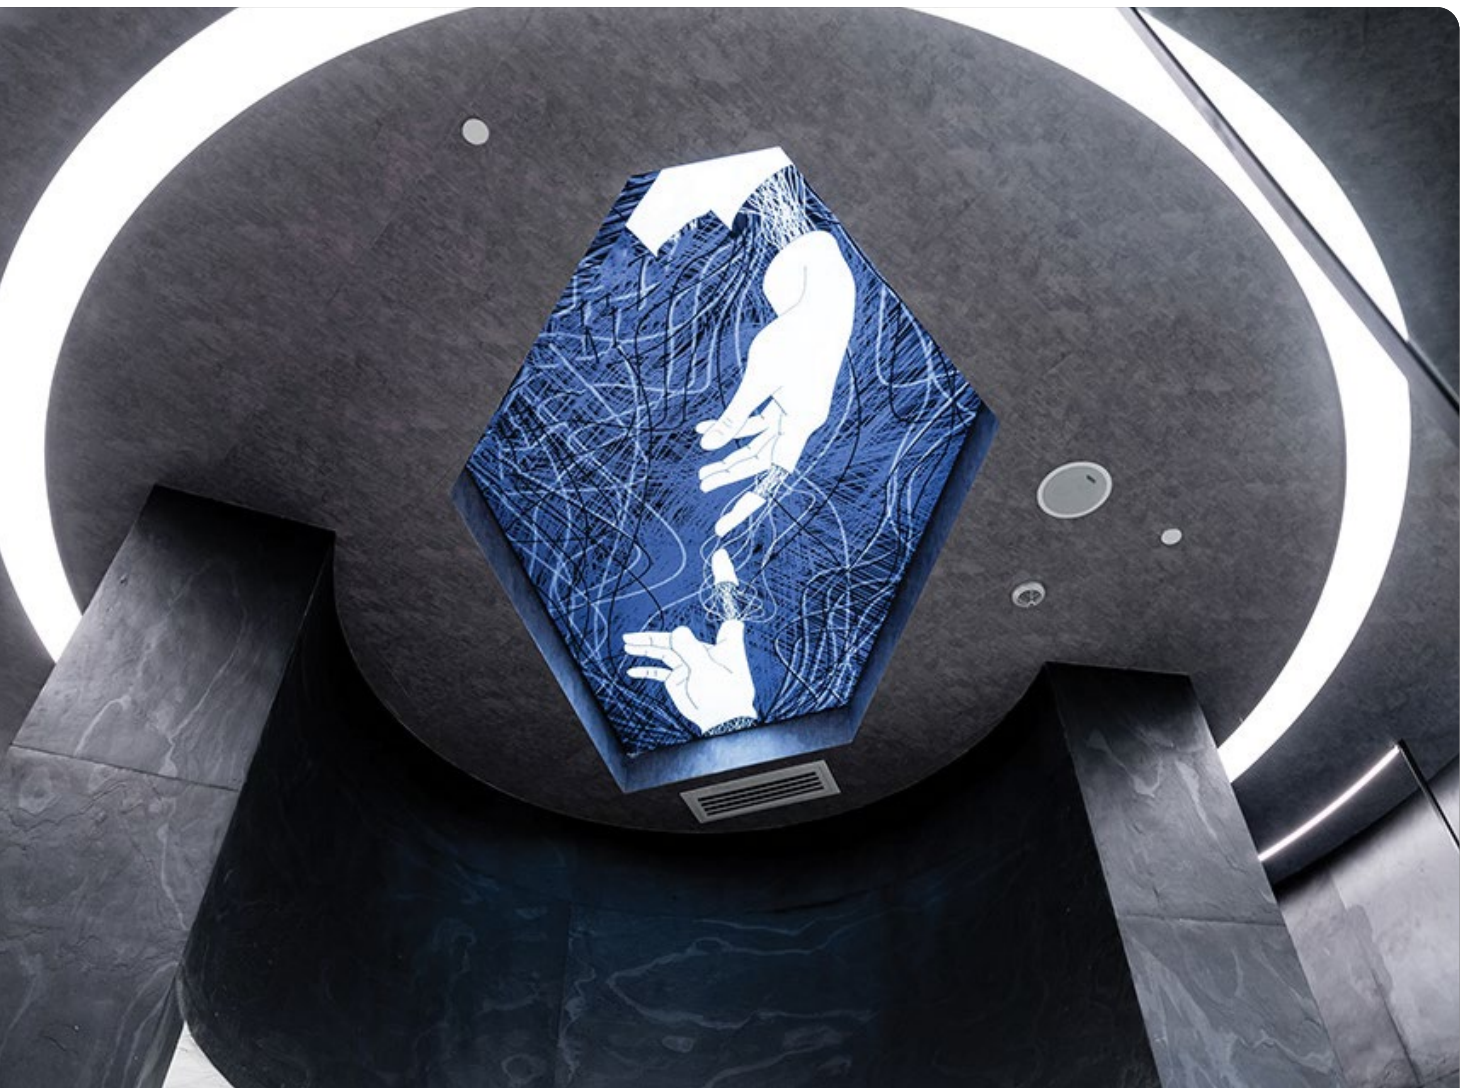

install sector. Designed for quick and easy installation, Cirrus delivers fidelity levels worthy of the Void badge.

With an understated and discreet appearance, 70 V / 100 V line integration with multiple voltage taps and a low impedance setting as standard.

## Cirrus 6.1

The Cirrus 6.1 is a discreet ceiling-mounted loudspeaker featuring a 6.5" LF transducer and 0.75" coaxial HF tweeter. Its compact design delivers powerful sound while maintaining a clean aesthetic, making it ideal for homes, hotels, restaurants, and retail spaces.

NEXUS SERIES

# Stylishly futuristic, modern technologies

**Embracing ultra-modern technologies in stylishly futuristic forms, the Nexus series is a modern piece of aural art, guaranteed to impress any listener.**

The radical styling of the Nexus range takes a new approach to delivering the best fidelity and coverage for club environments.

Virtual Arc technology within the mid-top enclosure forms a common acoustic centre at the rear of the array, allowing the same aural experience to be had by all that are in the throes of the Nexus, wherever they are standing.

## Nexus 6

The Nexus 6 features a radical design with 20 high-power transducers housed in a sculpted fibreglass enclosure. Using Virtual Arc technology to unify dispersion, phase, and timing, it delivers consistent coverage and powerful performance for large nightclubs, festivals, and bars.

## Nexus Q

The Nexus Q delivers powerful, well-defined upper bass using four 12" high-power transducers with a front-loaded horn and pressure gradient porting. This high-efficiency design ensures clean, controlled output, making it ideal for nightclubs, concerts, and festivals.

## Nexus X

The Nexus X delivers 8,000 watts of powerful low-frequency performance with eight 12" high-excursion transducers. Its advanced enclosure design reduces resonance and distortion, while aluminium bracing and customisation options enhance both performance and aesthetics.

## Nexus XL

The Nexus XL is a low-frequency enclosure designed to partner with the Nexus Q, delivering exceptional bass performance. Featuring a single 21" transducer and refined resonant chamber design, it provides powerful, characterful bass ideal for nightclub environments.

INCUBUS SERIES

# Sonically and visually captivating

**Incubus is renowned for its visually stimulating form and unmistakable sonic signature. Incubus provides a statement piece for any high impact and architecturally pioneering venue.**

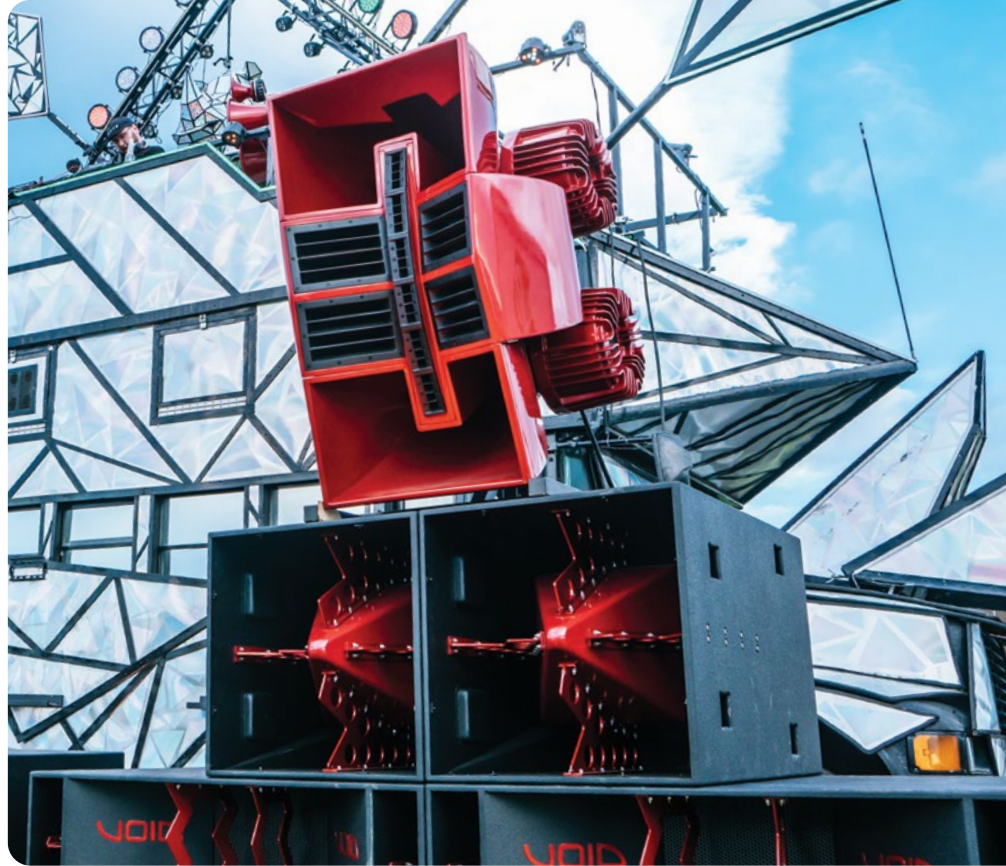

Providing levels of control thought impossible and perfect sound quality, the Incubus is the number one choice for club dance systems,

owing to its striking physical signature and performance. Hearing the highest quality of unadulterated sound through an Incubus makes it possible to feel as though you are inside music, in a fully immersive aural experience.

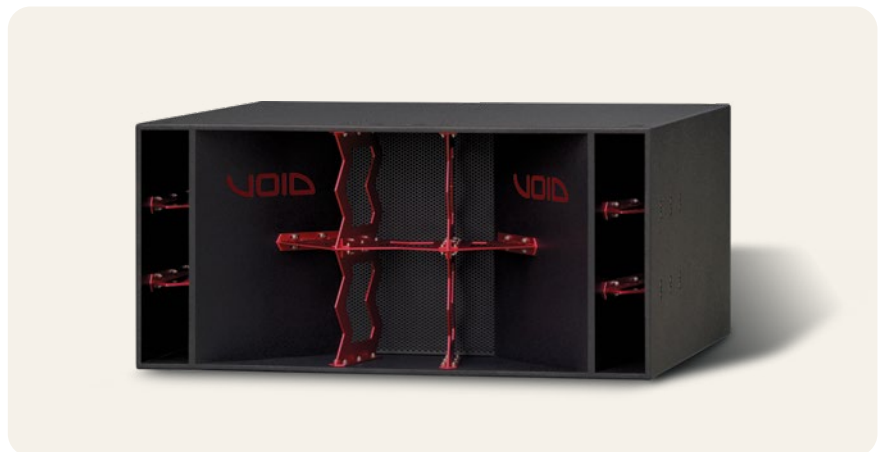

## Air Array

The Air Array features a futuristic design created for visually driven nightclubs, event spaces, and festivals. As the mid-high element of the Incubus system, it uses advanced technologies including frequency and power shading to deliver consistent SPL, high-fidelity sound, and exceptional output.

## Hyperfold

The Hyperfold delivers exceptionally fast and articulate upper-bass performance. Featuring four high-excursion 15" transducers with heatsink cooling, it produces immense output and powerful, precise kick-bass when used alone or in arrays.

## Incubus Sub

The Incubus Sub is a hybrid horn-loaded bandpass subwoofer with three 21" transducers handling 6000W AES. Designed to partner with the Hyperfold enclosure, it delivers fast response and powerful sub-60Hz bass for high-impact dance environments.

A musician in a dark jumpsuit is performing on a stage, holding a microphone and a small object. The stage is illuminated with bright spotlights, and the background features scaffolding and stage equipment. In the foreground, a large, black, perforated subwoofer is visible, which is the focus of the advertisement. The subwoofer is part of the Stasys Series and is being used in a concert setting.

STASYS SERIES

# Versatile 18" subwoofer series

With versatility placed as the heart of its design, the Stasys series provides extraordinary audio quality with distinctively compact styling.

Perfectly suited for use in concert halls, theatres, clubs, outdoor performance venues, sports facilities, and other large venues, Stasys loudspeakers can either be permanently installed or used for touring and temporary events, such as large AV presentations.

## Stasys 118

The Stasys 118 is a single 18" reflex-loaded subwoofer designed with the Stasys philosophy of precision and performance. Advanced resonance mapping and optimised bracing minimise cabinet colouration while maximising output, delivering powerful and accurate low-frequency performance.

## Stasys 218

The Stasys 218 is a dual 18" reflex-loaded subwoofer designed with the Stasys philosophy of precision and performance. Advanced resonance mapping and optimised bracing reduce cabinet colouration while increasing output, delivering powerful, high-quality low-frequency performance.

## Stasys XV2

The Stasys XV2 builds on the original design with refined internal resonant chambers that improve cooling and reduce power compression. Enhanced transient and phase response deliver more consistent performance and predictable behaviour when arrayed in touring and live venue systems.

ARCLINE SERIES

# The ultimate touring range

**The notorious Arcline series is renowned amongst the live-sound industry for consistently delivering crisp audio fidelity, without any compromise for aesthetic styling.**

Arcline's consistent sound intensity and linearity provides the entire audience with virtually identical sound, irrespective of where they stand.

Arcline line arrays offer quick and easy rigging, along with a smooth and flat frequency response. They also feature an practical 110-degree horizontal coverage pattern and require substantially fewer units to efficiently cover both indoor and outdoor acoustic spaces.

## Arcline 8

The Arcline 8 is a three-way loudspeaker known for high-fidelity sound, clarity, and extremely high output. Its 110° dispersion and advanced waveguide ensure consistent coverage, while the lightweight enclosure and durable TourCoat finish make it ideal for touring, events, nightclubs, and live venues.

## Arcline 118

The Arcline 118 features a high-power 18" neodymium transducer and can be arrayed with the Arcline 218 in multiple configurations, including cardioid. Its FEA-modelled port reduces distortion, while front and rear connections allow fast setup and flexible deployment.

## Arcline 218

The Arcline 218 is a dual 18" neodymium subwoofer delivering powerful low-frequency performance for the Arcline series. Advanced FEA design maximises output in a compact footprint, while front and rear SpeakON™ connectors support clean cardioid setups and ergonomic handles improve handling.

### ArcM 12

The ArcM 12 is a low-profile stage monitor designed for clean stage lines and powerful performance. Featuring a coaxial 12" and 1.4" neodymium transducer with optimised porting, it supports multiple monitoring angles and is ideal for touring, live venues, bars, clubs, and AV applications.

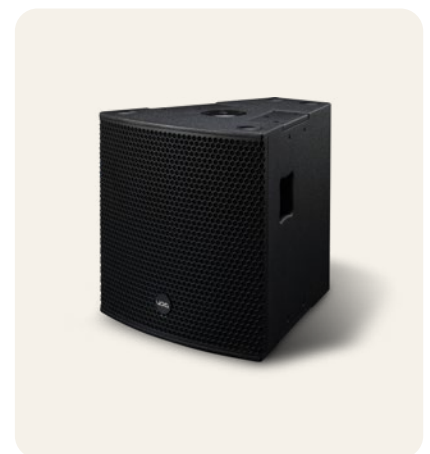

### ArcM 15

The ArcM 15 is a versatile stage monitor designed for touring, theatres, and live venues. Featuring a coaxial 15" and 1.4" neodymium transducer, dual monitoring angles, and truck-friendly dimensions, it delivers powerful performance with quick and easy deployment.

### Arclite

The Arclite is a two-way active, three-way arrayable point source loudspeaker designed to pair with Arcline 218 and 118 subwoofers. It delivers scalable output and coherence with minimal rigging and dual NL4 SpeakON™ connectors for fast setup.

### Arclite 15B

The Arclite 15B is a 15" mid-bass extension designed to enhance Arclite loudspeaker performance. It can be ground stacked or flown, with versatile rear rigging for flexible installation.

AMPLIFIERS

# Powering the future of sound

Exceptional levels of audio efficiency have been expertly contained in a compact package which is both user and environmentally friendly.

Our revolutionary amplifiers offer unparalleled reliability and power density. Eco-friendly to run, this results in impressively low operational costs, power consumption and carbon footprint.

### Bias Q1+

The Bias Q1+ is a compact, energy-efficient amplifier designed to reduce power consumption, heat, and operating costs. Compatible with Void's optimised presets, it delivers reliable performance and high-quality audio in a lightweight, durable design.

### Bias Q1.5+

The Bias Q1.5+ is a compact four-channel amplifier delivering reliable power for speakers such as Air 8, Airten V3, and Air Vantage. Its efficient power supply with Power Factor Correction and Smart Rails Management ensures stable, high-quality performance.

### Bias Q2+

The Bias Q2+ is a highly efficient four-channel amplifier designed to reduce power consumption, heat, and operating costs. Compatible with Void's optimised presets, it delivers consistent performance for nightclubs, hotels, restaurants, and retail spaces.

### Bias Q3

The Bias Q3 is a 2U touring based amplifier with easy preset selection from the front panel. Integrated with ArmoníaPlus the Q3 offers versatile controls, with powerful performance for high power, full-range sound systems.

### Bias Q5

The Bias Q5 is a versatile amplifier designed for touring and live applications. Compatible with Void's optimised presets, it delivers consistent, high-performance audio for nightclubs, bars, festivals, theatres, and houses of worship.

### Inca 500

The Inca 500 is a compact half-rack 1u amplifier capable of driving both Low-Z and Hi-Z loudspeakers. Featuring a web UI for easy set up without the need for additional software. Analogue and Digital inputs for versatile connectivity, it delivers up to 125W per channel in Low-Z mode or 250W in Hi-Z mode, with automatic power sharing for flexible installation.

CUSTOM COLOURS

# Bespoke sound systems for every space

Enhance your space with a completely bespoke sound system, designed specifically to compliment the aesthetic feel within your venue.

All of our fibreglass products can be customised to exactly match your desired colour scheme, or contrastingly complement a venue's interior design or branding.

Our bespoke RAL colour service includes over 200 RAL colours, including matte, gloss, satin and KROME finishes. We also take special orders and requests for colour customised bracing on our subwoofers, including the Stasys Xair model.

Please get in touch if you would like to know more about custom colour options.

CUSTOM FINISHES

# The Natural Wood Collection

**Barewood highlights the natural grain for a bright, modern look, while Vintage adds warmth and timeless character. Available across the Venu V2 range, including Venu 6 V2, Venu 8 V2 and Venu 208.**

## **Barewood**

A bright, contemporary wood finish that preserves the natural tone and grain. Lightly treated for protection, it feels calm and modern, perfect for minimalist, Scandinavian, and light filled spaces.

## **Vintage**

A richer, oak inspired stained finish that adds warmth and depth. The stain enhances the natural grain while preserving the timber's character, ideal for heritage interiors and boutique spaces.

**Engineered to the same acoustic and structural standards as every Venu V2 enclosure, it delivers identical performance and compatibility.**
